

Custom 3PL Solutions for Your Food & Beverage Business

Custom 3PL Solutions for Your Food & Beverage Business

If you don't have adequate space for inventory in the right locations, or you're struggling to manage your distribution internally, you're probably stuck in reactive mode.

With extensive experience providing third-party logistics (3PL) services for the food and beverage industry, IDM Products can help your company streamline the storage and delivery of goods.

We help our food and beverage clients drive sales, improve customer service, streamline operations, and stay ahead of supply chain issues. The result is a partnership that delivers strategic support and customized services to help you deliver on time and on budget for your customers.

Tailored Solutions That Deliver Industry Success

IDM Products offers services that help food & beverage clients simplify their entire operations, from receiving to inventory management to shipment.

Flexible Storage Options:

When it comes to food & beverage storage, safety is paramount. With secure, clean handling and batch controls, IDM Products ensures safety standards are met. We meet all LIFO, FIFO, and FEFO requirements, offering the ability to pick and ship by batch code or best-by date. IDM Products also uses every shipping method available to get your product safely delivered on time and on budget.

Efficient Inventory Management:

Our goal is simple: to flow product through our distribution centers safely, accurately, and efficiently. We do this through a combination of facility and equipment, process and procedure, and inventory management systems. Food & beverage customers have access to real-time inventories, shipping and receiving information, and automated reporting.

Industry Compliance for Safety:

We maintain several industry certifications to meet your food & beverage company's requirements:

Helping Food & Beverage Companies Overcome Challenges

We believe that with the right 3PL partner, you can manage the complexities of today's supply chain issues and changing customer demands. IDM Products offers the following scalable and customizable technology solutions to help our clients overcome challenges.

Inventory systems to track and manage product from arrival to departure.

JIT inventory, in which goods are received from suppliers only as they are needed.

Software and protocols that integrate IDM Products with ERPs, commerce platforms, and carrier/parcel services.

Quality control solutions, including a visual quality inspection of products based on company standards, with paperwork and photography to back up the process.

Data accessibility through standard and customized reporting, EDI, and web portals, including EDI transactions for daily reconciliation.
